

Read the text below and answer the questions.

Fossils

Fossils are shapes of dead animals and plants that lived millions of years ago made in rock. Usually when something dies it is eaten or decays and disappears. However, when an animal or plant dies and gets covered over, it can stay there and over time, become a fossil.

Dinosaurs

Fossils are really important in understanding what has happened a long time ago. Without them we would not even know that dinosaurs existed! People who study fossils are called palaeontologists and these are the people who have found out what we now know about dinosaurs. However, this only started 200 years ago, so we've only known about dinosaurs for 200 years!

Did you know?

- 'Sue' is the nickname given to the most complete and best preserved Tyrannosaurus Rex specimen ever found.
- The word 'fossil' comes from an old word 'fossilis', meaning 'dug up'.
- Fossils are only found in sedimentary rock.
- The fossils in the pictures are called ammonites. It is the town symbol for Whitby in North Yorkshire. Whitby is good for fossil hunting and long ago, people thought that the ammonites were snakes turned to stone by St. Hilda!

How a Fossil is Made

When some plants or animals die, their body sinks into mud or is buried by sand. This often happens at the bottom of the sea and stops it from rotting or being eaten by other animals. Whilst it is underground, water and minerals seep into the bones and where the bones and body used to be, to make a hard shape. This is squashed under more layers of sand, mud and eventually rock over many, many millions of years.

Questions.

- 1) What are fossils?
- 2) What is the name of someone who study fossils?
- 3) Why weren't fossilised animals or plants eaten by other animals?
- 4) How long have we known about dinosaurs?
- 5) What does the word '*decay*' mean?
 - a) Fossil
 - b) Rot
 - c) Disappear
 - d) Die
- 6) Use the text to fill in the blanks:
Fossils are made when a dead animal or plant gets _____ .
- 7) What is the name of the place that is good for fossil hunting?
- 8) What does the Latin word 'fossils' mean?
- 9) Number the statements from 1-5 to show the order in which way fossils were created.

- It is squashed under more layers of sand and mud
- Minerals and water seep into the bone and where the bones used to be
- The layers of sand and mud turn into rock and create a fossil
- Their body sinks into the mud or sand
- A plant or animal dies
